

MULTI-GRIP TIRE HANDLER

GET A GRIP & ADD EFFICIENCY TO YOUR OPERATION

The GVM Multi-Grip Tire Handler allows users to change tires on application units quickly, safely, and efficiently. The tire handler is now available in two models and is able to lift and maneuver tire and wheel assemblies weighing up to 2000 pounds. Equipped with a universal mounting plate allowing the Multi-Grip Tire Handler to easily attach to any skid steer, front end loader, or tractor.

The Multi-Grip Tire Handler features a hydraulically operated gripping jaw, allowing it to easily center on the tire with a firm grip. The grabbing assembly swivels approximately 60 degrees, allowing users to easily align the wheel with the studs or the wheel bolt holes on the hub. The front end loader movement allows users to pick tires up from a flat position on the ground and rotate them to a vertical position to attach to the unit.
